

Please amend the claims in accordance with the following:

What is claimed is:

1. (previously Amended) A process for stain removal on a textile comprising the steps of treating a stained area of a textile with a solution of Chloramine-T, and allowing the solution to stand on the stained area for an effective period of time.
2. (original) The process of claim 1 wherein the effective period of time is from about 5 minutes to about 12 hours, and the solution contains from about 0.05 to about 5 weight percent Chloramine-T.
3. (Original) The process of claim 2 wherein the solution of Chloramine-T further incorporates an effective amount of a sodium or potassium phosphate salt.
4. (Currently Amended) The process of claim 3 wherein solution of Chloramine-T further incorporates an effective amount of a sodium or potassium phosphate salt.
5. (Cancelled) The process of claim 3 wherein solution of Chloramine-T further incorporates an effective amount of a sodium or potassium phosphate salt.
6. (Original) The process of claim 4 wherein the concentration of Chloramine-T further incorporates an effective amount of a sodium or potassium phosphate salt.
7. (Amended) The process of claim 3 wherein the concentration of Chloramine-T is from about 0.5 to about weight percent, and the concentration of the wetting agent is from about 0.05 to about 1.0 weight percent and the wetting agent is an anionic wetting agent.
8. (Original) The process of claim 4 wherein the concentration of Chrloramine-T is from about 0.5 to about 3 weight percent, and the concentration of the wetting

agent is from about 0.05 to about 1.0 weight percent and the wetting agent is a anionic wetting agent.

9. (Original) The process of claim 5 wherein the concentration of Chloramine-T is from about 0.2 to about 2 weight percent and the wetting agent is a nonionic wetting agent.
10. (Original) A process for removing a stain from an article of clothing which comprises the steps applying to the stained area, an aqueous solution containing from about 0.5 to about 3 weight percent Chloramine-T from about 0.05 to about 1.0 weight percent of nonionic wetting agent and from about 0.5 to about 5 weight percent of a sodium phosphate salt.
11. (Cancel) The process of claim 10 wherein the wetting agent is ethoxylated ROH sulfonate where R is CH₃, CH₃ CH₂ or CH₂ CH₂ and the sodium phosphate salt is trisodium phosphate .
12. (New) A process for removing a stain from an article of clothing which comprises the steps applying to the stained area, an aqueous solution containing from about 0.5 to about 3 weight percent Chloramine-T, from about 0.05 to about 1.0 weight percent of a wetting agent which is an ethoxylated ROH sulfonate where R is CH₃, CH₃ CH₂ or CH₂ CH₂ and the sodium phosphate salt is trisodium phosphate.
